

Sustainability Statement

Sustainability is at the heart of all that Sustainable Tech 4 Good Group Ltd and Veritas Digital Services Ltd do and stand for. Our core business is the repair and refurbishment of surplus IT equipment, extending product life and preventing e-waste through reuse. Sustainable reuse saves unnecessary CO2 emissions, as well as the extraction of scarce raw materials. Our business has a positive effect on our environment and helps mitigate climate change.

We provide Sustainability reports to our clients, showing the negative environmental impacts that have been mitigated through the reuse of their tech. We break down non-repairable equipment for spares, increasing yields and the number of items available for reuse, further helping our environment.

Our mission is to increase the number of businesses engaging with our services, and thus spread sustainable IT refresh strategies as widely as possible, while promoting social good through digital inclusion.
